               The invention relates to a modified pyrogenic toxin derived from a native disulphide loop-containing pyrogenic toxin where the modified toxin comprises a disulphide loop having no more than 10 amino acids. The modified toxin has a fever-inducing activity or an emeric response inducing activity decreased by about 100-fold in comparison to a native toxin. The modified pyrogenic toxin, that is a staphylococcal enterotoxin, is useful for non-specifically enhancing an immune function and for vaccination against diseases such as toxic shock syndrome and food poisoning. This sequence represents the staphylococcal enterotoxin, sec3 = 100 pyrogenic represents the staphylococcal enterotoxin,

modification involves deletions within the disulfide loop region of SEC (196261). The modified toxins retain useful biological properties, such a sthe ability to induce cytokine production, but have substantially reduced toxicity compared to the corresponding unmodified native toxin. Enerth response inducing activity and fever inducing activity are typically decreased by at least about 100-fold, while LDSO (in Dutch Belted rabbits) is at least 100-fold higher than the native toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                    122

The invention relates to pyrogenic toxins, such as staphylococcal enterotoxins, modified in the disulfide loop region. Typically, the modification involves deletions within the disulfide loop
The invention relates to a modified pyrogenic toxin derived from a native disulphide loop-containing pyrogenic toxin where the modified toxin comprises a disulphide loop having no more than 10 amino acids. The modified toxin has a fever-inducing activity or an emetic response-inducing activity decreased by about 100-fold in comparison to a native toxin. The modified pyrogenic toxin, that is a staphylococcal enterotoxin, is useful for non-specifically enhancing an immune function and for vaccination against diseases such as toxic shock syndrome and food poisoning. This sequence represents the staphylococcal enterotoxin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Enterotoxin, SEC-MNCopeland, toxin; disulfide loop; protein engineering

                                                                                                                                                                                                                                                                                                                                                          176 FNS--SPYETGYIKFIENNGNTFQYDYMPAPGDKFDQSKYLMMYNDNKTVDSKRVKIEVH 233
region of SEC (see AAY06261). The modified toxins retain useful biological properties, such as the ability to induce cytokine production, but have substantially reduced toxicity compared to the corresponding unmodified native toxin. Emetic response inducing activity and fever inducing activity are typically decreased by at least about 100-fold, while LDSO (in Dutch Belted rabbits) is at least 100-fold higher than the
                                                                                                                                                                                                                                               57

                                          The invention relates to a modified pyrogenic toxin derived from a native disulphide loop-containing pyrogenic toxin where the modified toxin comprises a disulphide loop having no more than 10 amino acids. The modified toxin has a fever-inducing activity or an emetic response tinducing activity decreased by about 100-fold in comparison to a native toxin. The modified pyrogenic toxin, that is a staphylococcal enterotoxin, is useful for non-specifically enhancing an immune function and for vaccination against diseases such as toxic shock syndrome and food poisoning. This sequence represents the staphylococcal enterotoxin,

This protein represents the Staphylococcus aureus type C enterotoxin SEC2. The invention relates to pyrogenic toxins, such as staphylococcal enterotoxins, modified in the disulfied loop region. Typically, the modification involves deletions within the disulfide loop region of SEC (see AAYGOSES). The modified toxins retain useful biological properties, such as the ablility to induce cytokine production, but have substantially reduced toxicity compared to the corresponding unmodified native toxin. Experies inducing activity and fever inducing activity are typically decreased by at least about 100-fold, while LDSO (in Dutch Belted rabbits) is at least 100-fold higher than the native toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | : : | : | : | : | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | : | | : | : | | : | : | : | | : | : | : | : | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 HPWYNDLLVDLGSTAATSEYEGSSVDLYGAYYGYQC-----AGGTPNKTACMYGGVTL 113

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                      The invention relates to a modified pyrogenic toxin derived from a native disulphide loop-containing pyrogenic toxin where the modified toxin comprises a disulphide loop having no more than 10 amino acids. The modified toxin has a fever-inducing activity or an emetic responseinducing activity decreased by about 100-fold in comparison to a native toxin. The modified pyrogenic toxin, that is a staphylococcal enterctoxin, is useful for non-specifically enhancing an immune function and for vaccination against diseases such as toxic shock syndrome and food poisoning. This sequence represents the staphylococcal enterotoxin,
                                  New modified staphylococcal enterotoxin derived from a native disulfide loop-containing pyrogenic toxin, useful for non-specifically enhancing an immune function and as a vaccine against toxic shock syndrome or food
                                                                                                                                                                                                                                                                                                                                                                                                          61 HPWYNDLLVDLGSTAATSEYEGSSVDLYGAYGYQC-----AGGTPNKTACMYGGVTL 113

The sequences given in AAR45011-21 are Staphylococcal enterotoxins (SEs) which may be used in the methods of the invention for treating cancer in a patient. These SEs, and homologues of them, can be used as tumouricidal agents for treating cancers and autoimmune disease. They exhibit trumouricidal activity and toxicity identical to that observed for the Protein A perfusion system. They were be administered by i.v. injection. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                          9
                                                                                          The present invention relates to a tumour cell capable of stimulating antitumor immune reactivity in vitro or in vivo contains and expresses an exogenous nucleic acid molecule encoding a superantigen or its active fragment and an exogenous nucleic acid molecule encoding a costimulatory molecule that activates T cells in conjunction with an antigenic stimulus. The invention may be used for cancer therapy by stimulating an anticancer immune response in vivo or ex vivo
                             Tumor cell capable of stimulating antitumor immune reactivity in vitro or in vivo comprises exogenous nucleic acids encoding a superantigen and a costimulatory molecule.

the present sequence is the protein sequence of entertocoxin and staphylococcus aureus. Similarity is shown, in several streeches of sequence, between staphylococcal enterotoxins, streptococcal pyrogenic exotoxins and staphylococcal exfoliative toxins (see ABB76234-44). In the present invention, synthetic polypetides useful in tumour therapy and blocking or destroying autoreactive T and B lymphocyte populations are characterised by subscantial structural homology to staphylococcal enterotoxin A and enterotoxin B, and to streptococcal pyrogenic exotoxins, with statistically significant sequence homology and similarity (2 value of Lippman and Pearson algorithm in Monte Carlo analysis exceeding 6) to include alignment of cysteine residues and similar hydropathy profiles. These superantiqens are used to treat solid tumours, including their metastases, without radiation, surgery or standard chemotherapeutic agents. A claimed method of human cancer treatment involves contacting haematopoietic cells from a patient with a specific V beta subset of cells, and reintroducing these cells into the patient to induce an in vivo therapeutic, tumouricidal reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             123 --KKVPINLWIDGKQTTVPIDKVKTSKKEVTVQELDLQARHYLHGKFGLYNSDSFGGKVQ 180

was isolated and purified from S.aureus. It can be used for treating
                                                                                                                                                                                                                            cancer, activating cytokine mediators and procoagulant systems, augmenting natural killer cell cytotoxicity, etc. The enterotoxin can be administered intravenously, optionally with ibuprofen to attenuate toxic reaction to SEG3. Synthetic polypeptides having structural homology to Staphylosoccal exotoxins are claimed, provided the homology includes statistically significant sequence homology alignment of Cysteine residues and similar hydropathy profiles. The modified toxin is characterised in that the 95th amino acid (cysteine) is substituted with serine. This results in a toxin that has improved stability. The modified enterotoxin is useful for preventing or treating infectious diseases due to microorganisms in animals such as cows, pigs, horses, sheep, hens, dogs and cats, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                       The present sequence is a non-lethal Streptococcus pyogenes Streptococcal toxin A (SPB-A) mutant, which can be used to produce vaccines to protect animals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPB-A causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPB-A is especially useful for treating T cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPB-A can be selectively toxic to T cell lymphoma cells. N.B. Sequence not given in the specification, but constructed using the wild type SPB-A sequence given on pages 77-79

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        72
                                                                                                                                                                                                                         SPE A can be used for tumouricidal treatment, esp. with a haemolysin. Synthetic polypeptides having structural homology to Streptococcal pyrogenic exctoxins are claimed, provided the homology includes statistically significant sequence homology, alignment of Cysteine residues and similar hydropathy profiles. See AAR13203-R13211. (Updated on 27-AUG-2003 to correct OS field.)

                                                       treating cancer
                                                                                                  The sequences given in AAR45011-21 are Staphylococcal enterotoxins (SEs) which may be used in the methods of the invention for treating cancer in a patient. These SEs, and howologues of them, can be used as tumouricidal agents for treating cancers and autoimmune disease. They exhibit temporaticidal activity and toxicity identical to that observed for the Protein A perfusion system. They may be administered by i.v. injection. The present sequence is the protein sequence of exotoxin A (SPE A) of Streptococcus pyogenes. Similarity is shown, in several stretches of streptococcus pyogenes. Similarity is shown, in several stretches of sequence, between staphylococcal enterotoxins, streptococcal pyrogenic exotoxins and staphylococcal exfoliative toxins (see ABBY6234-44). In the present invention, synthetic polypeptides useful in tumour therapy and in content of blocking or destroying autoreactive T and B lymphocyte populations are characterised by substantial structural homology to staphylococcal characterised by substantial structural homology to staphylococcal characterised by substantial structural homology not enterotoxin A and enterotoxin B, and to streptococcal pyrogenic exteroxins, with statistically significant sequence homology and similarity (2 value of Lipman and Pearson algorithm in Monte Carlo analysis exceeding 6) to include alignment of cysteine residues and tumours, including their metastases, without radiation, surgery or standard chemotherapeutic agents. A claimed method of human cancer treatment involves contacting haematopoietic cells from a patient with one or more superantigens ex vivo to generate stimulated cells, selecting a specific V beta subset of cells, and reintroducing these cells into the patient to induce an in vivo therapeutic, tumouricidal reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              72

The present sequence is a non-lethal Streptococcus pyogenes Streptococcal animals against which can be used to produce vaccines to protect animals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPE-A causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPE-A is especially useful for treating T cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPE-A can be selectively toxic to T cell lymphoma cells. N.B. Sequence not given in the specification, but constructed using the wild type SPE-A sequence given on pages 77-79

The present sequence is a non-lethal Streptococcus pyogenes Streptococcal toxin A (SPE-A) mutant, which can be used to produce vaccines to protect animals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPE-A causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPE-A is especially useful for treating T cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPE-A can be selectively toxic to T cell lymphoma cells. N.B. Sequence not given in the specification, but constructed using the wild type SPE-A sequence given on pages 77-79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120 TEEKKVPINLWIDGKQTTVPIDKVKTSKKEVTVQELDLQARHYLHGKFGLYNSDSFGGKV 179

The present sequence is a non-lethal Streptococcus pyogenes Streptococcal animals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (SPE-A) mutant, which can be used to produce vaccines to protect toxic shock syndrome (SPE-A) and to treat cancer and streptococcal artibodies (Ab) to be produced, which may be used to ameliorate STSS antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPE-A is especially useful for treating T cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPE-A can be selectively toxic to T cell lymphoma cells. N.B. Sequence not given in the specification, but constructed using the wild type SPE-A sequence given on pages 77-79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mutant SPE-A toxin with at least one amino acid change is substantially non-lethal - used in vaccine composition for treatment of cancer and streptococcal toxic shock syndrome etc.
                                                                                                                                                         production; vaccine;

The present sequence is a non-lethal Streptococcus pyogenes Streptococcal toxin A (SPB-A) mutant, which can be used to produce vaccines to protect animals against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPE-A causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralising Ab is preferably administered in conjunction with antibiotic therapy. The mutant SPE-A is especially useful for treating T cell lymphomas, and ovarian and uterine cancer. It is thought that mutant SPE-A can be selectively toxic to T cell lymphoma cells. NB. Sequence not given in the specification, but constructed using the wild type SPE-A sequence given on pages 77-79

The mutant SPE-A can be used to produce vaccines to protect a mainly against wild type SPE-A and to treat cancer and streptococcal toxic shock syndrome (STSS). The mutant SPE-A causes neutralising antibodies (Ab) to be produced, which may be used to ameliorate STSS symptoms, e.g. fever, hypotension, group A streptococcal infection, myositis, fascitis and liver damage. The neutralishing Ab is preferably administered in conjunction with antibiotic therapy. The

GENERAL INFORMATION:

APPLICANT: TERMAN, David S

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT OF NEOPLASTIC DISEASE

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT OF NEOPLASTIC DISEASE

FILE REFERENCE: 870759

CURRENT APPLICATION NUMBER: US/09/870,759

CURRENT FILING DATE: 2002-01-14

PRIOR APPLICATION NUMBER: US 60/209,128

NUMBER OF SEQ ID NOS: 166

SOFTWARE: Patentin version 3.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Squence 2, Application US/09336036
Squence 2, Application US/09336036
Publication No. US20020018781A1
GENERAL INFORMATION:
APPLICANT: Schliever, Patrick M.
APPLICANT: Mitchell, David T.
APPLICANT: Gahr, Pamala M.
TITLE OF INVENTION: MUTANTS OF STREPTOCOCCAL TOXIN C AND METHODS OF USE FILE REPERBNCE: 600.347US1I
CURRENT APPLICATION NUMBER: US/09/336,036
